Royal London Hospital

The Royal London Hospital

Client: Royal London Hospitals NHS Trust in association with Health Management Group.

Project Value: £280 Million

The project, which was designed and master-planned by Sohrab Rustomjee was to comprise the construction of a new 1100 bed Teaching Hospital on the site of the present Royal London Hospital on Whitechapel Road, with the teaching element being met by enlargement of the Queen Mary and Westfield Medical College. It would have involved the closure of St Bartholomews, the London Chest, and the Queen Elizabeth Children's Hospitals.

A terracing of built form would respond to the scale and variety of the surrounding buildings by tiering down to the pedestrianised square around the Church of St Augustine with St Philip.

Despite the achievement of being made Preferred Bidder in the PFI process, the project was later put on hold along with a number of others in the London Review of Teaching Hospitals.
